

Key Features

- Cat6A Shielded, up to 10GbE
- Custom lengths and color options
- Pre-labeled and serialized
- Tested to meet TIA/EIA standards
- Made in the USA
- Quick-turns in less than 10 business days

Ideal Applications

- Switch-to-switch or server patching
- AI infrastructure networking
- Data center structured cabling

Additional Benefits

- Excellent EMI protection: Foil shielding reduces interference in high-noise environments
- Reliable signal transmission for high-bandwidth and latency-sensitive applications
- Consistent labeling simplifies cable identification, maintenance, and troubleshooting
- Supports power over ethernet (PoE) applications
- Color-coded boot options for quick port or VLAN identification
- Built-to-order lengths help reduce slack and maintain airflow

Cat6A Shielded Patch Cables with Custom Labeling

Our Cat6A shielded patch cables offer reliable, noise-resistant Ethernet connections for high-speed data centers. Available with pre-labeling, colored boots, and custom lengths, these assemblies support structured cabling consistency.
